Objective

Motivated and technically skilled Technician with hands-on experience in embedded systems, IoT devices, and industrial electronics. Skilled in working with Raspberry Pi, ESP8266, NodeMCU, and Arduino, with expertise in troubleshooting, testing, and system installation. Seeking to contribute my technical knowledge and problem-solving skills to a dynamic organization.

Experience

- **Enthu Technology** 31/07/2023 - 07/08/2023
  Student Trainee
  - Worked on Raspberry Pi, ESP32, and LoRa-based IoT projects.
  - Developed real-time monitoring systems using sensors and cloud data logging.
  - Assisted in assembling, wiring, and testing circuits.
  - Gained practical experience in embedded programming, sensor interfacing, and communication protocols.
- **Imai Technologies** 16/04/2025 - Present
  Embedded Support Engineer
  - Assembled, wired, and tested IoT and electronic systems.
  - Configured Raspberry Pi GPIO pins for controlling relays, lights, and sensors.
  - Programmed ESP8266 and NodeMCU for Wi-Fi-based device control and data transfer.
  - Performed troubleshooting and maintenance of electrical and electronic equipment.
  - Assisted in project installation and field testing.

Education

- **Coimbatore Institute of Engineering and Technology** 2025
  B.E - Electronics and Communication Engineering
  7.35%
- **ABCS KenBridge School (CBSE)** 2021
  Senior Secondary Certificate Examination
  58.4%
- **ABCS KenBridge School (CBSE)** 2019
  Secondary School Examination
  48.4%

Skills

- Microcontrollers: Raspberry Pi, ESP8266, NodeMCU, Arduino
- IoT Applications: Sensor interfacing, data monitoring, cloud connectivity
- Circuit Design: PCB design (EasyEDA), circuit assembly, testing
- Programming: C, C++
- Electrical Systems: Wiring, soldering, troubleshooting, relay control
- Automation: PLC (Basic knowledge)
- Communication Protocols: UART, SPI, I2C, Wi-Fi

Projects

- **Automatic rain sensing car wiper using arudiuno**
  Project utilizes ARDUINO microcontroller to detect rainfall through a sensor, activating windshield wipers for safe driving.
- **IoT Based Bridge Health Monitoring and Alerting System**
  The proposed system leverages IoT, sensor networks,cloud computation, and mobile platforms to enhance bridge health monitoring and safety alerts.
- **IoT Based Circuit Breaker Monitoring and Control**
  The IoT -based circuit breaker system designed for lineman protection in power distribution lines has proven to be a reliable and effective solution for fault detection, system reset, and user interface management.
- **Boom Barrier Position Detection Using MPU6050 and NodeMCU**
  Developed a system using an MPU6050 accelerometer and gyroscope with NodeMCU (ESP8266) to detect boom barrier arm positions. The systemcontinuously reads the sensor's pitch angle and uses a threshold-based algorithm to determine whether the arm is fully closed, opening, or fully open, providing real-time position monitoring for automated gates or parking barriers.

Achievements & Awards

- Attended National Conference on CIET
- Attended smart India Hackathon in CIET
- Attended Hands-on workshop in PCB Designing using Easy EDA.

Languages

- Tamil
- English

DECLARATION

- I hereby declare that the above furnished information and details
  are genuine and true to my knowlwdge.
